Abstract: Studies on human mobility have a long history with increasingly strong interdisciplinary connections across social science, environmental science, information and technology, computer science, engineering, and health science. However, what is lacking in the current research is a synthesis of the studies to identify the evolutionary pathways and future research directions. To address this gap, we conduct a systematic review of human mobility-related studies published from 1990 to 2020. Drawing on the selected publications retrieved from the Web of Science, we provide a bibliometric analysis and network visualisation using CiteSpace and VOSviewer on the number of publications and year published, authors and their countries and affiliations, citations, topics, abstracts, keywords, and journals. Our findings show that human mobility-related studies have become increasingly interdisciplinary and multi-dimensional, which have been strengthened by the use of the so-called ‘big data’ from multiple sources, the development of computer technologies, the innovation of modelling approaches, and the novel applications in various areas. Based on our synthesis of the work by top cited authors we identify four directions for future research relating to data sources, modelling methods, applications, and technologies. We advocate for more in-depth research on human mobility using multi-source big data, improving modelling methods and integrating advanced technologies including artificial intelligence, and machine and deep learning to address real-world problems and contribute to social good.

Keywords: human mobility; literature review; bibliometric analysis; network visualisation; CiteSpace; VOSviewer

Human Mobility Open Data

Data Category		Name and Provider	Region and scale	Available Time	OD Flow	Availability	Strengths	Weaknesses	Selected References
Public Transit System	Air flight	International Air Transport Association (IATA)	Worldwide	Since 2010	Yes	Private	Rich information for business intelligence. Aggregated statistics for various applications	Mostly private data	Menkir et al., 2021 Bogoch et al., 2020
		OpenSky-Network	Worldwide, mostly for Europe and North America	Since 2012	Yes	Public	Detailed tracking information	API limitations	Zhuang et al., 2020 Iacus et al., 2020
	Train	Transit system / dataset in different countries (e.g., China, U.S., Italy)	China, USA, Italy (by state, city, district)	Different for different regions	Yes	Public	Available in countries where there is a booking website	Real-time data but without history data or sometimes web crawling needed	Zhang et al., 2020; Carteni et al., 2020 Hu et al., 2020
	Metro	Transport authority (e.g., MATSim-NYC)	U.S.	Different for different regions	No	Public	Detailed ridership data, at the station level	Non-trackable; no route record	Zheng et al., 2020; Ahangari et al., 2020
Social Activity		Apple Mobility Trends Report	Worldwide/city, county, state	04/14/2020 ~ present	No	Public	global wide; one single file; data divided by country/region, sub-region, city	data source method (requests for direction in Apple Maps)	Huang et al., 2020b Kurita et al., 2021; Hadjidemetriou et al., 2020
		Google Mobility Reports	Worldwide/city, county, state	2/15/2020 ~ present	No	Public	global wide; one single file	not comparable among countries	Pepe et al., 2020; Delen et al., 2020; Rutz et al., 2020
		Foursquare Mobility Reports	U.S./county, state	02/19/202 ~present.	No	Submit Application	Available in 25 types of POI and by age group	Only available in U.S.	Gao et al., 2020 Fathi-Kazerooni et al., 2020 Ding et al., 2020
		SafeGraph Mobility Reports	U.S./census tract, county, and state	01/01/2019 ~present	Yes	Submit Application	Varieties of data categories	Data are only available on Amazon S3	Li et al., 2020 Kang et al. 2020
Index-based Mobility Data		Cuebiq Mobility Index	U.S. at multiple geographic levels	01/01/2020	No	Submit Application	Available in DMA level; index allows counties to be compared to one another	Only available in U.S.	Fraiberger et al., 2020 Pepe et al., 2020
		Baidu Mobility Index	China/city and province	1/1/2020 ~ 5/7/2020 & 9/3/2020 ~ present	Yes	Public	inter/intro-city mobility index	Not publicly accessible after May 7 2020, only available for Mainland China	Ze-Liang et al., 2020 Liu et al., 2020 Xu et al., 2020

Human Mobility Open Data

	Descartes Lab Mobility Index	U.S./county and state	03/01/2020 – 06/06/2020	No	Submit Application	accurate positioning data (m50 score based on normalization methods)	Inter-city index not covered; only freely available in a certain period of time and scale	Warren et al., 2020 Gao et al., 2020; Chen et al., 2020
	Unacast Social Distancing Index	U.S.	02/24/2020 ~ present	No	Submit Application	Granular data, available down to specific data points; bias correction based on classifications of businesses	Since data is coming from third party sources, people may have to agree to consent on those sources	Brodeur et al., 2021
	University of Maryland Mobility Metrics and Social Distancing Index	U.S./county and state	01/01/2020 ~ present	No	Submit Application	Integrated and cleaned location data from multiple sources; be highly representative	Only available in the U.S.	Zhang et al., 2020 Lee et al., 2020 Ghader, et al., 2020
	Camber Systems Social Distancing Reporter	U.S./county	08/01/2020 ~ present	No	Submit Application	Integrating multiple data sources; less biased and more representative; easy to interpret	subject to calibration; only available in U.S. county level; no data before August 2020	Jeffrey et al., 2020
Social Media-Derived Mobility Data	Geotagged Tweets	Worldwide/any spatiotemporal scale	01/01/2018 ~ present	Yes	Public	Worldwide coverage, real-time, aggregation-flexible	Bias in population, low penetration	Huang et al., 2020a Li et al., 2021 Su et al., 2020
	Facebook Movement Range Maps	Worldwide	01/03/2020 ~ 31/08/2020	No	Submit Application	Machine-readable format that is global and free of charge	Only provided by mobile phone users who have enabled location history	Lau et al., 2020; Kuchler et al., 2020 Beria et al., 2021

Data Source

Variable Name	Source
X1: Percentage of residents staying home	Percentage of residents that make no trips more than 1.61 km away from home
X2: Daily work trips per person	Average number of work trips made per person. A work trip is a trip going to or from one's imputed work location
X3: Daily non-work trips per person	Average number of non-work trips made per person
X4: Distances travelled per person	Distances in kilometres travelled per person on all travel modes
X5: Out-of-county trips (in thousands)	Number of all trips that travels from and to the outside of the county

$$SDI = [X_1 + 0.01 \times (100 - X_1) \times (0.25X_2 + 0.45X_3 + 0.3X_4)] \times 0.8 + 0.2X_5$$

Data Sharing

Open source research data repository software

Researchers

Enjoy full control over your data. Receive *web visibility*, *academic credit*, and *increased citation counts*. A personal dataverse is easy to set up, allows you to display your data on your personal website, can be branded uniquely as your research program, makes your data more discoverable to the research community, and satisfies data management plans. [Want to set up your personal dataverse?](#)

Journals

Seamlessly manage the submission, review, and publication of data associated with published articles. Establish an *unbreakable link* between *articles in your journal* and *associated data*. Participate in the open data movement by using Dataverse as part of your journal data policy or list of repository recommendations. [Want to find out more about journal dataverses?](#)

Institutions

Establish a research data management solution for your community. Federate with a growing list of Dataverse repositories worldwide for increased discoverability of your community's data. Participate in the drive to set norms for sharing, preserving, citing, exploring, and analyzing research data. [Want to install a Dataverse repository?](#)

Developers

Participate in a vibrant and growing community that is helping to drive the norms for sharing, preserving, citing, exploring, and analyzing research data. Contribute code extensions, documentation, testing, and/or standards. *Integrate research analysis, visualization and exploration tools*, or other research and data archival systems with Dataverse. [Want to contribute?](#)

A screenshot of a web browser displaying the Harvard Dataverse website. The browser's address bar shows the URL "dataverse.harvard.edu/dataverse/2019ncov". The page header includes the Harvard Dataverse logo and navigation links like "Add Data", "Search", "About", "User Guide", "Support", "Sign Up", and "Log In". The main content area is titled "Resources for COVID-19 (China Data Lab)" and includes a breadcrumb trail: "Harvard Dataverse > China Data Lab Dataverse > Resources for COVID-19". There are "Contact" and "Share" links. Below this is a carousel of four categories: "Data", "Development Code", "News Report", and "Research Papers". A search bar is present with a "Find" button and a link to "Advanced Search". The search results section shows "1 to 6 of 6 Results" and lists several items, each with a Dataverse icon and a link: "Data (China Data Lab) 2020-2-11", "Research Papers (China Data Lab) 2020-2-11", "Workflows (China Data Lab) 2020-2-11", "Web Sites (China Data Lab) 2020-2-11", and "News Report (China Data Lab) 2020-2-11". On the left side of the results, there are filters for "Dataverses (6)", "Datasets (0)", and "Files (0)", as well as "Dataverse Category" (Research Group (6)) and "Publication Year" (2020 (6)). A "Feedback" button is located at the bottom right of the results area.

Related Research

Objective: to evaluate the proposed CAS and other mobility factors on confirmed COVID-19 cases with various temporal delays at a county-level and study the impacts of travel-related factors and social distancing measures on COVID-19

Variables	Data description	Data source
COVID	Daily confirmed cases of COVID-19	The New York Times (2020)
CAS	Proposed Community Activity Score (CAS)	HDOT (2020)
SDI	Social Distance Index: ranging from 0 (no social distancing is observed) to 100 (everyone staying at home and no visitors are entering the county)	Maryland Transportation Institute (2020)
<i>Travel frequency and distance</i>		
Home	Percentage of people traveling less than 1 mile away from their residence place compared to the pandemic baseline.	USDOT (2020)
Trip	The number of trips made per day	USDOT (2020)
Drive	Daily Volume of driving directions requests compared to the pandemic baseline.	Apple (2020)
Transit	Daily Volume of transit directions requests compared to the pandemic baseline.	Apple (2020)
Walk	Daily Volume of walking directions requests compared to the pandemic baseline.	Apple (2020)
Distance	The maximum travel distance to a point from the initial point of the day (i.e., the max-distance mobility) compared to the pandemic baseline.	Descartes Labs (2020)
<i>Mobility trend</i>		
Retail	The number of visits to restaurants,	Google (2020)

Grocery	The number of visits to grocery markets, food warehouses, farmers' markets, specialty food shops, drug stores, and pharmacies compared to the pandemic baseline.	Google (2020)
Park	The number of visits to national parks, public beaches, marinas, dog parks, plazas, and public gardens compared to the pandemic baseline.	Google (2020)
Stations	The number of visits to national parks, public beaches, marinas, dog parks, plazas, and public gardens compared to the pandemic baseline.	Google (2020)
Work	The number of visits to places of work compared to the pandemic baseline.	Google (2020)
Residences	The number of visits to places of residence compared to the pandemic baseline.	Google (2020)
<i>Out-of-county visitors</i>		
Airport	The number of people through Hawaii airport (hundreds).	Hawaii Tourism Authority (2020)

Guo, Y., Yu, H., Zhang, G., & Ma, D. T. (2021). Exploring the impacts of travel-implied policy factors on COVID-19 spread within communities based on multi-source data interpretations. *Health & Place*, 69, 102538.

Methodology

Community Activity Score (CAS)

$$A_{mn} = \left(a \frac{I_{mn}D_{mn}}{I_{m0}D_{m0}} + b \frac{O_{mn}D_{mn}}{O_{m0}D_{m0}} \right) * 100 \quad (1)$$

where A_{mn} is the activity score of community m on day n during the pandemic.

a and b are predetermined coefficients, and $a + b = 1$,

I_{mn} is the incoming traffic volume of the community m on day n ,

I_{m0} is the average incoming traffic volume of the community during the pre-pandemic baseline,

O_{mn} is the outgoing traffic volume of the community m on day n ,

O_{m0} is the average outgoing traffic volume of the community during the pre-pandemic baseline,

D_{mn} is the average travel distance of the community m on day n ,

D_{m0} is the average travel distance of the community during the pre-pandemic baseline.

As CAS is a relative activity level compared to the pre-pandemic baseline, the baseline value for CAS is 100. In this study, $a = b = 0.5$.

$$A_n = \sum_{m=1}^M w_m A_{mn}$$

Zero-inflated Negative Binomial (ZINB) models

$$P(c_n) = \frac{EXP(-\lambda_n) \lambda_n^{c_n}}{c_n!}$$

$$\lambda_n = EXP(\beta x_n + \varepsilon_n)$$

Results

Fig. 2. Daily COVID-19 cases and important policies.

Fig. 3. Daily traffic volume (in-and-out of the zone) for each zone during the study period.

Results

Weekly average of COVID-19 cases and travel-related factors.

Summary

Findings

- Daily confirmed COVID-19 cases increase as the number of trips increases, while the daily confirmed COVID-19 cases decrease when the walking frequency increases.
- Increasing visits to locations such as parks and beaches contribute negatively to the daily confirmed COVID-19 cases.
- The modeling results show that both mandatory face-covering policy and mandatory work-from-home policy contribute positively toward reducing COVID-19 infection in Honolulu County.

Limitations

- Honolulu County is relatively unique compared to most of the counties in the U.S. as most of its out-of-county travels are through the airport.
- Some of the other factors found by some studies related to neighborhood built environment were not included in this study

Replicable, Reproducible and Expandable Data Analysis

Introduction to Workflow Tool KNIME

<https://www.knime.com/>

The screenshot shows the KNIME Explorer on the left and the workflow editor on the right. The Explorer displays a tree view of the project structure, with the following items visible:

- My-KNIME-Hub (hub.knime.com)
- EXAMPLES (knime@hub.knime.com)
 - 00_Components
 - Visualizations
 - Choropleth World Map
 - Hierarchical Clustering and Heatmap
 - 02_ETL_Data_Manipulation
 - 01_Filtering
 - 07_Four_Techniques_Outlier_Detection
 - _Templates
 - MapViz
 - 03_Visualization
 - 04_Geolocation
 - 03_GeoIP_Visualization_using_Open_Street_Map_(OSM)
 - 04_Visualization_of_the_World_Cities_using_Open_Street_Map_(OSM)
 - 07_Choropleth_World_Map
- LOCAL (Local Workspace)
 - 07_Choropleth_World_Map
 - D3_Days-Hour_Heatmap_Example

The workflow editor on the right shows a workflow titled "GeoIP Open Street Map Visualisation". A yellow warning box at the top states: "This is a temporary copy of 'knime://EXAMPLES/Users/knime/Examples/03_Visualization/04_Geolocation/03_GeoIP_Visualization_u'. Use 'Save As...' to save a permanent copy of the workflow to your local workspace, or a mounted KNIME Server."

The workflow description reads: "GeoIP Open Street Map Visualisation. This workflow uses geo IP data on randomly generated IP addresses and maps them using Open Street Map. The GEO IP data is available from <http://dev.maxmind.com/geoip/>, whereby this workflow uses the free "lite" version to map IP addresses to geo locations.

Requirements to run this workflow:
- KNIME OpenStreetMap extension (available from KNIME Labs)
- KNIME Web Analytics extension

The workflow diagram consists of the following nodes and connections:

- Generate random IP-addresses** (Start node)
- GeolP database** (Start node)
- Binner (Dictionary)** (Node receiving input from "Generate random IP-addresses")
- Get locations for IPs** (Node receiving input from "Binner (Dictionary)" and "GeolP database")
- Joiner** (Node receiving input from "Binner (Dictionary)" and "Get locations for IPs")
- Join with geo-coordinates** (Label for the Joiner node)
- Map-marker appearance** (Node receiving input from "Joiner")
- OSM Map View** (Node receiving input from "Map-marker appearance")
- OSM Map to Image** (Node receiving input from "Map-marker appearance")

Introduction to Workflow Tool KNIME

<https://www.knime.com/>

- Workflow is displayed as connected nodes which makes it easy to troubleshoot and visualize
- Easy to use without much knowledge of coding
- Great extensions for data preprocessing, analysis, and visualization
- Connection to other languages, such as JS, R, Python, etc.
- Open-source
- Cross platform interoperability
- Has a decent size community that supports Q&A.
